NETWORKS
AN INTERNATIONAL JOURNAL

Subject Index to Volume 27, 1996

Accumulation trees, 239
All-terminal reliability, undirected graph, 125
APPRCOST, 267
Approximation algorithms, 159
Automorphism, banyan networks, 53

Banyan networks, 2 X 2-switch, 53
Binary trees, transmitting on, 145
Blossom inequalities, 95
Broadcast networks, fault-tolerant minimum, 293
Broadcast trees, 293
Broadcasting, 293
  synchronous networks, with dynamic faults, 309
  with universal lists, 183
Bus networks, minimum gossip, 239

Capacity constrained package transfer problem, 81
Certainty equivalent heuristic, 133
Chinese Postman Problem, mixed, algorithm, 95
Circulant digraphs, 35
Circular permutation graphs, linear time algorithm, 171
Commodity distribution system, discrete-time network model, 25
Compression ratios, large, 1
Cut ranking problem, 117

de Bruijn digraphs, 35
de Bruijn graphs, transmitting on, 145
Decomposition formula, 219
Degeneracy, in network flow problems with side constraints, 267
Diagonal meshes, transmitting on, 145
Directed graph, bipartite, 197
Doubly linked networks, 35

Edge fault-tolerant trees, optimally, 203
Edge-*m*-route flows, maximum value, 279
Edges
  critical, 203
  most vital, 253, 255
Embedding, into thick or thin strips, 1

Facility location algorithm, 219
Factoring theorem, 125
Failure probabilities, 125
Fault-tolerant minimum broadcast networks, 293
Fault-tolerant multiprocessor systems, 203
Feedback, strategy for periodic network flows, 25
Fiber Data Distributed Interface, 35
Floyd–Warshall algorithm, 219
Folding with compression, 1
Folding with extension, 1
Forward loop backward loop network, 35

Global spare node, minimizing, 19
Gomory and Hu's algorithm, 109
Gomory cuts, 95
Gossiping, 239
Graphs
  bipartite, most vital edges of matching (addendum), 253
  edge-connectivity, 309
  fault-tolerant broadcasting, 293
  k-regular *k*-connected, wide-diameter, 257
  node fault tolerance, 19
  with random arc costs, 133
Grid-to-grid embedding problem, 1
Grids
  broadcasting time, 183
  embedding into grids, 1
Gusfield's algorithm, 109

HAMILTONIAN PATH, 175
Homomorphism, 53
Host processor, 145
Hypercube, wide-diameter, 257

Integer network synthesis problem, 109
Interconnection networks, architecture, 145
Interval graph, all-pairs shortest path problem, 215

Lagrangian relaxation, 267
Leaf-median problem, 175
Line iteration digraphs, 35
Linear arrays, transmitting on, 145
Linear time algorithm, circular permutation graphs, 171
Link failure, dynamic, broadcasting time, 309
list *blocks* A and B, 1
Local area networks, doubly connected directed topologies, 35
Loop networks, directed circulant, 35

Manhattan street network, 35
Marriage Theorem, generalization, 197
Max-flow min-cut theorem, 109, 117
  m-route flow, 279
Medium access protocol, 35
Melzak procedure, modified, node-weighted Steiner trees, 73
Menger's theorem, generalization, 279
Mesh, circuit-switched row-column broadcasting, 159
Metropolitan area networks, doubly connected directed topologies, 35
Minimum broadcast graph, 239
Minimum gossip graph, 239
Mixed cutset, 117
Mixed networks, disconnecting sets, 117
Modified buddy property, 53
Multicommodity flow problem, mixed integer/linear program formulation, 81

Multicommodity problems, disconnecting sets, 117
Multiroute flows, maximum, 279
Multiterminal cut problem, 117

Naive adaptive heuristic, 133
Network flow model, dynamic, 25
Network flow problem, with side constraints, approximating reduced costs, 267
Network location models, 219
Node fault tolerance, graphs, 19
Nonhomogeneous symmetric tree, 19
Nonloop networks, 35

Objective functions, leaf-dependent, spanning tree problems, 175
Omega network, 53
$O(n^2)$ algorithm, 219
  all-pairs shortest path problem, 215
$O(n^3)$ algorithm, 219
  most vital edges of matching, 253
Open loop feedback heuristic, 133

Package routing, transportation networks with fixed vehicle schedules, 81
Path-stripping phase, 81
Periodic network flows, feedback strategy, 25
Permutation graph, circular, 171
Polyhedra, 0-base, 25
Pseudo-manhattan graph, 95

Random networks, 133
Randomized rounding, 81
Recognition algorithm, 171
Reduced costs, approximating, under degeneracy, 267
Relisum problem, 219
Rings
  broadcasting time, 183
  transmitting on, 145
Routing, row-column, 159
Routing algorithms, 35

S-disconnecting set, 117
Sensitivity analysis, 219, 267
Set constraints, balanced, 95
Sets, disconnecting, in single and two-terminal-pair networks, 117
Shortest path problem
  all-pairs, 215
  stochastic, with recourse, 133
Simplex methods, 267
Single facility location problem, tree with unreliable edges, 219
Skewed 2-tiles, 1

Spanning tree problems, leaf-dependent objectives, 175
s–t mixed cutsets, 117
Star packing, k-bounded, 197
Star trees, transmitting on, 145
Stars, edge fault-tolerant, 203
Steiner points, 73
Steiner trees, node-weighted, modified Melzak procedure, 73
Submodular flow problem, 25
Supergraphs, critical, 203
Swing Surgery, 125
Synchronous networks, with dynamic faults, broadcasting, 309

Target tubes, 25
Telegraph model, 239
Telephone model, 239
Threshold graph, 125
Topology
  doubly connected directed, 35
  transmitting on, 145
Toroidal mesh, n-dimensional, 257
Torus
  broadcasting, 183, 309
  circuit-switched row–column broadcasting, 159
Tower building problem, 1
Trailer network, 267
Transmission, network topologies, 145
Transmitting scheme, 145
Transportation networks, with fixed vehicle schedules, 81
Traveling Salesman Problem, reduction of mixed Chinese Postman Problem, 95
Trees
  2-median computing (erratum), 169
  broadcasting time, 183
  edge fault-tolerant, 203
  with unreliable edges, 219
Two-pair multicommodity problems, disconnecting sets, 117

Universal-list model, broadcasting, 183
Undirected graph, all-terminal reliability, 125
Undirected network
  maximum multiroute flows, 279
  two-pair problem, 117
Unit compression patterns, 1
Upper bounds, tightness, 309

Vertex-m-route flows, maximum value, 279
Vertex optimality conditions, 219

Windy Postman Problem, applied to mixed Chinese Postman Problem, 95
